The running-config and startup-config are different when configuration changes have not been saved since the last boot. 7.2.1 boot-config The boot-config file is an ASCII file that Aboot uses to configure console communication settings, locate the EOS flash image, and specify initial network configuration settings.

Section 7.2: Configuration Files - Arista
Virtual IP and MAC Addresses. Virtual-router IP addresses can be configured on VLAN interfaces in addition to a primary address. All VTEPs in a direct VXLAN network can be configured with the same virtual router address. This allows devices to use a common IP address as their VXLAN gateway.

Section 22.3: VXLAN Configuration - Arista
VLAN policy configuration is supported on the Arista 7010, 7050 (excluding 7050SX3-48YC12, 7050CX3-32S, 7050QX2-32S, 7050SX2-72Q, 7050SX2-128, 7050TX2-128), 7060, 7250, and the 7300 series platforms. VLAN policy is not supported in the following cases:

Arista EOS Central - default an interface configure
For configuration information on the enable password please see the Arista Configuration Guide. The default switch configuration allows usernames that are not password protected to log in only from the console. The aaa authentication policy local command configures the switch to allow unprotected usernames to log in from any port.

Introduction Arista CloudVision Portal (CVP) uses configlets to create configuration snippets for individual or groups of switches based on user selection. These configlets can be either static or dynamic. Static configlets include static EOS CLI configuration statements as if they were right on the switch configuration file.
