For a dust collection system to function adequately engineers must design and operate the system to maintain the (4) key design parameters of CFM, FPM, Vacuum Pressure and Air to Cloth Ratio (or A/C). Changes to any of these key system parameters will result in systemwide performance issues.

Designing and Sizing Baghouse Dust Collection Systems

Dust Collection Design Guide A dust collection design guide (in PDF format) originally written by Air Handling Systems - July 17, 2001 This document - "Designing Your Air Handling Dust System" - is a design guide originally written by Air Handling Systems, and has been converted into a two page PDF document (*requires Acrobat Reader*).

Dust Collection Design Guide - WOODWEB

How to Design A Dust . Collection System . Clamp together ducting . Easy & fast to install, just clamp together, no rivets, screws or welding needed . Adaptable to your existing ductwork . Local dealer support . Leak-tight laser welded seams, instead of lock-form or spiral duct - which badly leaks and allows debris harbors and snag opportunities . 45% less labor to install . 45% less downtime ...

Acces PDF Dust Collection System Design Guide

This project helps to understand as a design guide which provides information that will help to achieve optimum performance and energy efficiency in commercial dust collection systems by properly...

(PDF) Design analysis of Dust collection system

Designing Your Dust Collection System. There are two phases to designing your dust collection system: The first phase is sizing your duct work for adequate volume and velocity of flow for the type of dust you will be creating; and the second phase is computing the static pressure (SP) of your system to determine the size and power of your dust collection unit.

Designing an Efficient Dust Collection System - Spiral ...

There are five simple steps to designing an effective and efficient dust collection system. 1. Draw a floor plan of your shop 2. Determine Duct Velocity (FPM) 3.

Design Information Designing Your Dust Collection System

Baghouse Design, Dust Collection Blog In this design guide we have reviewed a relatively simple baghouse dust collection system with few variables. Even at this level it is still recommend to consult with an experienced dust collector OEM like Baghouse.com before making any equipment purchase.

Additional Considerations for Dust Collection System ...

In a separate article I will walk through the dust collection design at each tool in my shop to help you complete your dust collection system design. Watch the next newsletter for specifics on how I optimized dust collection at various tools in my shop. Photos By Author . Simplifying Dust Collection for Your Woodworking Power Tools

How dust collection systems work A dust collection system works by capturing woodworking dust and debris in a stream of air and moving it through the system's ductwork to a collection area. It's powered by a dust collector that uses a large induction motor to drive a special type of fan called an impeller.

Getting Started with Dust Collection

The metal elbow (top), which is designed for central dust-collection systems, has a gentle sweep, which lowers resistance to airflow. Plastic PVC pipe has a tighter-radius bend and restricts airflow more. Ribbed flexible pipe also disturbs airflow, up to three times as much as metal. A 2-hp unit can sometimes handle two machines at once

Dust Collection for the One-Man Shop - Woodcraft

Dust collection systems are essential for many industrial facilities for adhering to clean air standards set by the Federal Clean Air Act, OSHA and MSHA. Companies also benefit as clean air results in healthier employees which increases productivity and employee morale.

Guide: How to Design a Dust Collection System

Ductwork is used to carry the dirt and air from the collection point to the collector. It must be sized properly to create a " carrying velocity " to keep dirt moving through. Duct sizing is based on 2 variables: the particulate being collected and the volume of air being moved. The heavier the dirt, the higher the air velocity needed.

Sizing Ductwork for Dust Collection Systems

Air Handling Design Guide

Acces PDF Dust Collection System Design Guide

Here are some tips on how you can ensure the efficiency of your dust collection hood: All the collection hoods are designed and located properly. The area around the collection hood is enclosed to prevent excessive outside air being pulled in the system. The hood area is large enough to maintain capture velocities of 200ft per min - 250 fpm.

Dust collection tips and guidelines to remember

Before purchase and use of a Product, please review the Product application, national & local codes, regulations, and be sure that the Product, dust collection design, installation, and use will be in compliance. Download our Air Handling Design Guide. We can also offer you Tips on Installing your Air Handling System.
