problem. But, when you can support others to start reading, it will be better.

~~introductory econometrics a modern approach solution manual~~

Define a new variable, *actmiss*, which equals one if *act* is missing, and zero otherwise. (ii) Create a new variable, say *acto*, which is the *act* score when *act* is reported and zero when *act* is missing. Find the average of *acto* and compare it with the average for *act*. (iii) Run the simple regression of *score* on *act* using only the complete cases.
