Finally, an interview with Dr. William Krieger revealed the importance of the study of philosophy and how it relates to the concept of love. Research has concluded that the disciplines of biology, psychology, and philosophy are all important in analyzing love; however, more research needs to be done in order to define what love actually is, and how we can apply this knowledge in our everyday lives.

It's nice to think this way, it makes it seem magical. However, the truth is that there's a biological explanation of love. Courtship, desire, and passion are simply cocktails of neurons, hormones, and love. Talking about a biological explanation of love can be a bit of a buzzkill. For some people, this matter-of-fact explanation of love ruins the excitement.

Compassionate love usually develops out of feelings of mutual understanding and a shared respect for one another. 2 Passionate love is characterized by intense emotions, sexual attraction, anxiety, and affection.

~~5 Ways That Theories of Psychology Explain Love~~

As it turns out, love is all about the brain – which, in turn, makes the rest of your body go haywire. According to a team of scientists led by Dr. Helen Fisher at Rutgers, romantic love can be broken down into three categories: lust, attraction, and attachment.

~~Love, Actually: The science behind lust, attraction, and ...~~

The purpose of this chapter is to document social science research on love, with an emphasis on social psychological contributions. The chapter begins with the fundamental question: What is love? Laypeople's and social scientists' answers to this question are presented, including Berscheid's (2010) recent model that delineates four basic kinds of love: romantic/passionate love, companionate ...

~~Social Psychology of Love – Oxford Handbooks~~

By Saul McLeod, updated 2015 The biological approach believes us to be as a consequence of our genetics and physiology. It is the only approach in psychology that examines thoughts, feelings, and behaviors from a biological and thus physical point of view. Therefore, all that is psychological is first physiological.

Studying love scientifically--brain imaging, lab experiments--gives us a deep understanding of how love works. And love is central to human life. It is the biggest predictor--relationship qualities--the biggest predictor of human happiness, more than wealth or success. And it's a huge predictor of health.

~~The scientific study of the love relationship | Britannica~~

In a proximate sense, love appears to be mitigated by the nine-unit neuropeptides oxytocin and vasopressin. Humans vary in their production of receptors for these wonder drugs, and thus vary somewhat in their capacity to love and respond to love. But that surge of well-being you feel when you nurse your baby?
