Otherwise known as shielded metal arc welding (SMAW), stick welding is a two-handed method, like TIG. Stick welding uses a metal filler rod, or stick, coated with flux. As the stick material melts in the heat, the flux coating also melts, creating both a gas and a liquid slag, which act to shield the weld from oxidation.

Metals and How To Weld Them: T. B. Jefferson, Gorham Woods ...

Welding is a fabrication process that joins materials, usually metals or thermoplastics, by using high heat to melt the parts together and allowing them to cool, causing fusion. Welding is distinct from lower temperature metal-joining techniques such as brazing and soldering, which do not melt the base metal.. In addition to melting the base metal, a filler material is typically added to the ...
