E This is mitosis During \_\_\_\_\_ both the contents of the nucleus and the cytoplasm are divided. During \_\_\_\_\_ both the contents of the nucleus and the cytoplasm are divided. S G1 mitosis G2 the mitotic phase The mitotic phase The mitotic phase encompasses both mitosis and cytokinesis.

Mitosis And Cytokinesis: study guides and answers on Quizlet

Cytokinesis is the final stage of cell division, during which the cytoplasm splits into two and two daughter cells form. Figure /(/PageIndex{8} /). Karyokinesis (or mitosis) is divided into five stages—prophase, prometaphase, metaphase, anaphase, and telophase.

Mitosis is the process in which a eukaryotic cell (cell containing a nucleus) separates its already duplicated chromosomes (copied during the S phase) into two sets of chromosomes so there will be two identical nuclei. It is generally followed by cytokinesis which divides the cytoplasm and cell membrane. Color the Cytokinesis stage yellow. This results in

This is a simpler operation than mitosis, where multiple, replicated chromosomes must be split carefully and moved into two equal "piles" that will become the nuclei Of two new cells after cytokinesis is complete. Mitosis 125

## Mitosis-POGIL-ANSWERS

Cytokinesis is the division of the cell's cytoplasm. It begins prior to the end of mitosis in anaphase and completes shortly after telophase/mitosis. At the end of cytokinesis, two genetically identical daughter cells are produced. These are diploid cells, with each cell containing a full complement of chromosomes.
