Peripheral neuropathies in clinical practice. Pascuzzi RM (1). Based on the history and physical examination, it is often possible to arrive at a relatively specific diagnosis of peripheral neuropathy. The clinical history and examination are often sufficient to create a more focused and appropriate laboratory evaluation, counseling for the patient as to long-term prognosis, and options for clinical management.

GUIDELINES ON PERIPHERAL NEUROPATHY

Peripheral neuropathy can result from traumatic injuries, infections, metabolic problems, inherited causes and exposure to toxins. One of the most common causes is diabetes. People with peripheral neuropathy generally describe the pain as stabbing, burning or tingling. In many cases, symptoms improve, especially if caused by a treatable condition.
